

102.9 - Gilding Metal (disk form)

The following four series of SRMs were produced through a cooperative program between NIST and the Institute for Non-Ferrous Metals (IMN), Gliwice, Poland and funded under the auspices of the Second Maria Skłodowska-Curie Fund. Development, characterization and certification of these brasses were carried out by IMN; homogeneity testing was performed by NIST. SRMs 1776 through 1780 are in the form of disks approximately 39.5 mm diameter and 20 mm thick; SRMs 1781 through 1785 are in the form of disks 39 mm diameter and 19 mm thick; SRMs 1786 through 1790 are in the form of disks 39 mm diameter and 25 mm thick; SRMs 1791 through 1795 are in the form of disks 38 mm diameter and 24 mm thick.

NOTE: Certification data for the Free Cutting Brasses, and Gilding Metals are concurrently undergoing review at the IMN and NIST. Therefore, when the Certificates of Analysis for these materials are issued, the actual certified values may differ from the projected values listed below.
